Landlord Receiving the Notification

PS2-Mobile Operator App

Walkthrough-

- Android application built on android studio using Java.
- Aimed as a solution for problem statement 2.
- Uses Firebase ML Vision for text OCR.
- Uses Google Maps API for address validation.
- Minor changes to address can be made.
- Changes made to the address are again validated.
- Final address can be submitted and stored to a database.

1) Main Screen

2) Sample Address captured with camera

3) Address text detected from image

4) Invalid if major changes made to address

5) Saves if valid changes made

PS3 - Address Formatting API

- REST API for proper formatting of address.
- Creates a web based server.
- Tesseract-OCR API to convert the image address to a corresponding text address.
- Supports 100 different languages.
- Formatted address can be viewed on localhost.
